

Sony Xperia X Compact - How to insert your SIM card

Your device only supports nano SIM cards. The nano SIM card and the memory card have separate slots in the same holder; make sure you don't confuse the two.

1. Using your fingernail, drag out the SIM/Memory card tray.
2. Firmly place the SIM card in the correct orientation in position (1) as shown in the illustration.
3. Firmly place the memory card in the correct orientation in position (2) as shown in the illustration.
4. Gently push the tray back into the slot until it fits into place.

If you needed a new sim card, you will have received a triple sim card pack. You'll need to pop out the appropriate sim card that is needed for your Sony Xperia X Compact.

Mini-SIM

Micro SIM

Nano Sim

Sony Xperia X Compact uses a nano sim card.
